(1) The summary risk indicator (SRI) is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the market or because we are not able to pay you. It ranges from 1 (low risk) to 7 (high risk). This indicator is not constant and will change according to the fund's risk profile. The lowest category does not mean risk-free. Historical data, such as that used to calculate the SRI, may not be a reliable indication of the fund's future risk profile. There is no guarantee that the investment objectives in terms of risk will be achieved.

SUSTAINABLE REPORT - METHODOLOGY

ODDO BHF AM considers that measuring the environmental, social and governance impact of an investment is an essential step in disseminating good practices in ESG integration. To do this, it is imperative to have reliable, simple quantitative criteria (no reprocessing) and to allow comparison between portfolios regardless of their composition (large vs midcaps, geographical and sectoral diversity).

The choice of indicators is therefore crucial for the relevance of impact measurement. The data for the environmental indicators come from our external non-financial analysis provider, MSCI. We systematically indicate the availability of the data at the level of the portfolio and its benchmark.

Carbon metrics methodology: We updated our methodology of carbon intensity calculation.

Starting January 31st, 2023, when reported carbon values are unavailable or inconsistent, estimated carbon values are used.

The estimations are based on average carbon value (scope 1+2 emissions) of sectoral peers as a function of revenues

*ESG rank at the end of the period.

MONTHLY MANAGEMENT COMMENT

In April 2026, global capital markets were significantly influenced by the easing of tensions in the Middle East. The negotiated ceasefire in the Iran conflict led to a noticeable calming of the geopolitical situation and a significant recovery in risk appetite. This triggered a broad-based rally on equity markets, whilst previously negative factors such as rising energy prices and uncertainty receded into the background.

The fund benefited significantly from this favourable market environment, gaining almost 10% over the month – a clear outperformance compared with the benchmark. Its aggressive positioning and focus on structural growth sectors proved particularly advantageous.

Key performance drivers included the technology sector in particular, led by semiconductor stocks. Shares such as AMD, Samsung and Broadcom recorded strong price gains and contributed significantly to the fund's positive performance. Industrial companies with a strong focus on artificial intelligence also performed very well. Siemens Energy and Schneider Electric are particularly noteworthy here, having made significant gains on the back of rising investment in infrastructure and digitalisation. By contrast, the healthcare sector lagged behind in this risk-on market environment. Companies such as Danaher, Stryker and McKesson saw their share prices fall, as defensive business models were less in demand in the current market climate.

As regards transactions, we opened a new position in LAM Research at the start of the month to specifically supplement the existing allocation in the semiconductor sector. Towards the end of the month, we took advantage of a weakening health care sector to make countercyclical purchases, adding to our existing positions in McKesson, Medpace and Eli Lilly. At the same time, we engaged in selective profit-taking following strong share performance in the semiconductor sector, including in ASM International, Broadcom and Samsung.

RISKS:

The fund is exposed to the following risks: operational risks including custody risk, market risk, currency risk, concentration risk

SFDR CLASSIFICATION²

The EU Sustainable Finance Disclosure Regulation (SFDR) is a set of EU rules which aim to make the sustainability profile of funds transparent, more comparable and better understood by end investors. Article 6: The management team does not consider sustainability risks or adverse effects of investment decisions on sustainability factors in the investment decision making process. Article 8: The management team addresses sustainability risks by integrating ESG criteria (Environment and/or Social and/or Governance) into its investment decision making process. Article 9: The management team follows a strict sustainable investment objective that significantly contributes to the challenges of the ecological transition, and addresses Sustainability Risks through ratings provided by the Management Company's external ESG data provider.
