INVESTMENT STRATEGY

The fund seeks long-term capital growth by investing in a diversified portfolio of large and mid cap US equities, primarily within the S&P 500 Index (70% at least). The fund employs a proprietary quantitative model that captures persistent market trends using a smart momentum strategy. This systematic, rule-based process ensures disciplined stock selection while maintaining flexibility to adapt to changing market dynamics. The approach is complemented by robust risk management and ESG integration, aligning with Article 8 SFDR standards. The strategy offer to investors a time-tested and actively managed solution within a cost-efficient ETF wrapper.

(1) The summary risk indicator (SRI) is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the market or because we are not able to pay you. It ranges from 1 (low risk) to 7 (high risk). This indicator is not constant and will change according to the fund's risk profile. The lowest category does not mean risk-free. Historical data, such as that used to calculate the SRI, may not be a reliable indication of the fund's future risk profile. There is no guarantee that the investment objectives in terms of risk will be achieved..

SUSTAINABLE REPORT - METHODOLOGY

ODDO BHF AM considers that measuring the environmental, social and governance impact of an investment is an essential step in disseminating good practices in ESG integration. To do this, it is imperative to have reliable, simple quantitative criteria (no reprocessing) and to allow comparison between portfolios regardless of their composition (large vs midcaps, geographical and sectoral diversity).

The choice of indicators is therefore crucial for the relevance of impact measurement. The data for the environmental indicators come from our external non-financial analysis provider, MSCI. We systematically indicate the availability of the data at the level of the portfolio and its benchmark.

Carbon metrics methodology: We updated our methodology of carbon intensity calculation.

Starting January 31st, 2023, when reported carbon values are unavailable or inconsistent, estimated carbon values are used.

The estimations are based on average carbon value (scope 1+2 emissions) of sectoral peers as a function of revenues

*ESG rank at the end of the period.

** rebased on the rated part of the fund | rating according to MSCI from CCC (High Risk) to AAA (Strong Opportunity).

MONTHLY MANAGEMENT COMMENT

The US equity market experienced a sharp decline in March 2026, driven by geopolitical turmoil stemming from a war with Iran. The S&P 500 fell 5.1% during the month, marking its largest one-month percentage decline since March 2025 and its worst month since September 2022. For the full first quarter, the S&P 500 dropped 4.6%, snapping a three-quarter winning streak. The conflict sent oil prices soaring above \$90 per barrel for the first time since 2023, with crude gaining more than 30% during the first week of March. The VIX Index climbed near 30, reflecting heightened market anxiety. However, the month ended on a positive note, with the S&P 500 surging 2.9% on March 31st—its best single-day performance since May—following reports that President Trump signaled willingness to end military hostilities with Iran. The Energy sector surged on the back of soaring oil prices. Consumer Staples posted the weakest performance with a decline of 9.3%, followed by Industrials down 9.2% and Health Care down 8.2%. Technology and communications stocks also faced significant pressure. From a factor perspective, Dividend and Value outperformed the market, while Quality underperformed. Factor return dispersion and volatility continued to be high.
