INVESTMENT STRATEGY

The fund seeks to achieve long-term capital growth by investing indirectly in a broad mix of asset classes via UCITS ETFs and ETCs. The fund dynamically allocates across all asset classes including equities, fixed income, and commodities, driven by a comprehensive top-down analysis of the global macroeconomic and microeconomic landscape. The investment process integrates quantitative models, fundamental insights, and market flow dynamics to ensure timely and effective positioning. The strategy is sector- and style-neutral, enabling full adaptability across market cycles. It also involves rigorous due diligence of all underlyings ETFs and their providers to ensure transparency and reliability. This flexible, diversified ETF solution is designed for long-term private and institutional investors seeking cost-efficient exposure to balanced multi-asset investing

*The glossary of indicators used is available for download on www.am.oddo-bhf.com in the Information section. | Sources : ODDO BHF AM SAS, Bloomberg, Morningstar® Sustainalytics provides company-level analysis used in the calculation of Morningstar's Sustainability Score.

(1) The summary risk indicator (SRI) is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the market or because we are not able to pay you. It rangesfrom 1 (low risk) to 7 (high risk). This indicator is not constant and will change according to the fund's risk profile. The lowest category does not mean risk-free. Historical data, such as that used to calculate the SRI, may not be a reliable indicationof the fund's future risk profile. There is no guarantee that the investment objectives in terms of risk will be achieved..
(**) The ongoing charges are based on the charges for the previous period. Estimates are drawn up for all funds that have not yet closed their first accounting period

MONTHLY MANAGEMENT COMMENT

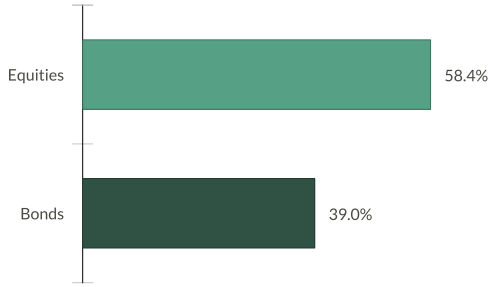

October was marked by a significant deterioration in market sentiment, fuelled by growing concerns about the financing of the artificial intelligence ecosystem. The sharp stock market correction affecting certain players in the sector, notably CoreWeave, reignited concerns about the sustainability of the business models of "neoclouds", whose growth relies on massive debt-financed investment. These fears led to a rise in risk aversion and resulted in a widening of credit spreads, particularly in the segments most exposed to the technology sector. Against this backdrop, the US and German sovereign bond markets served as safe havens, even though price pressures persist. In the United States, inflation stood at 3.7% at the end of September, while in the Euro Zone, price rises stood at 3.8%. Nevertheless, the main central banks opted to maintain the status quo at their meetings this month, presumably on the view that the tightening of financial conditions observed in the markets was already helping to curb economic activity and limit future inflationary risks. While the cycle of monetary tightening does not appear to be over, central bankers clearly preferred to allow themselves more time to assess the effects of the rate rises already implemented. It should be noted, however, that money markets continued to price in around 50 bps of further tightening on both sides of the Atlantic. From a microeconomic perspective, the earnings season confirmed the resilience of corporate profits, although the positive surprises proved less spectacular than in previous quarters. In the United States, nearly 80% of the companies that published their earnings exceeded analysts' expectations, with annual profit growth of 29%. In Europe, 57% of companies reported results that exceeded consensus estimates, while year-on-year profit growth stood at 35%. From a geopolitical perspective, tensions in the Middle East remained a major source of uncertainty. In the run-up to the US mid-term elections, Donald Trump continued to use particularly aggressive rhetoric towards Iran, fuelling fears of a worsening of regional tensions. Against this backdrop, oil prices continued to rise, with WTI closing the month at USD 104 a barrel. The MSCI World Index, expressed in local currencies, fell by 0.8%, in line with the major developed markets, with the S&P 500 and the EURO STOXX 50 losing 0.9% and 1.5% respectively. Behind this apparent stability in the indices, however, sectoral variations were particularly pronounced. The technology sector underperformed significantly, weighed down by concerns over the sustainability of spending on artificial intelligence. The Nasdaq and the SOX index thus fell by 6.6% and 15.3% respectively over the month. By contrast, the equally-weighted S&P 500 index rose by 5%. In the bond markets, the yield on the 10-year US Treasury fell by 35 bps to 4.93%, while the yield on the 10-year German Bund fell by 26 bps to 3.32%. However, concerns over the French budget persisted and led to a significant widening of the yield spread between the French OAT and the German Bund, which now stands at over 160 bps. On the European credit market, investment grade spreads widened by 14 bps (to 105 bps), while the high yield segment ended the month at 365 bps, up 6 bps. Finally, on the foreign exchange market, the euro was shunned by investors and fell by 1.5% against both the dollar and the yen.

SFDR CLASSIFICATION[2]

The EU Sustainable Finance Disclosure Regulation (SFDR) is a set of EU rules which aim to make the sustainability profile of funds transparent, more comparable and better understood by end investors. Article 6: The management team does not consider sustainability risks or adverse effects of investment decisions on sustainability factors in the investment decision making process. Article 8: The management team addresses sustainability risks by integrating ESG criteria (Environment and/or Social and/or Governance) into its investment decision making process. Article 9: The management team follows a strict sustainable investment objective that significantly contributes to the challenges of the ecological transition, and addresses Sustainability Risks through ratings provided by the Management Company's external ESG data provider.
