(1) The summary risk indicator (SRI) is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the market or because we are not able to pay you. It ranges from 1 (low risk) to 7 (high risk). This indicator is not constant and will change according to the fund's risk profile. The lowest category does not mean risk-free. Historical data, such as that used to calculate the SRI, may not be a reliable indication of the fund's future risk profile. There is no guarantee that the investment objectives in terms of risk will be achieved..

(**) The ongoing charges are based on the charges for the previous period. Estimates are drawn up for all funds that have not yet closed their first accounting period

(2) Information on the EU Sustainable Finance Disclosure Regulation (SFDR) can be found in the SFDR classification(2) section of the document.

30 APRIL 2026

MONTHLY MANAGEMENT COMMENT

April sharpened the contrast between resilient equity markets and a persistent deterioration in the oil/interest rate relationship. Whereas risky assets followed an upward trajectory, largely ignoring the conflict, commodity and bond markets continued to incorporate a growing risk premium, fuelled by the duration and complexity of the energy supply shock.

The macroeconomic environment is still relatively buoyant in the United States. While Q1 growth came in slightly below forecast, it remains solidly underpinned by exceptionally firm non-residential investment, driven by spending on software, technology equipment and AI-related infrastructure. This momentum was clearly reflected in the reporting season, which was surprisingly good, especially for the technology sector: at this stage, earnings growth justifies the amount of capex committed and reinforces the narrative of ever-robust demand for computing capacity. Against this backdrop, the Fed maintained a cautious approach at Jerome Powell's last meeting as Chairman, retaining an accommodative bias despite PCE inflation rising back above 3.5% due to energy. However, the reality for the FOMC remains one of a prolonged status quo, with the markets no longer anticipating any near-term rate cuts.

The situation looks more uncomfortable in Europe. Recent PMIs have rekindled stagflation fears, while pressure on energy supply chains is intensifying as the conflict drags on. The ECB left rates unchanged but significantly hardened its tone, and a rate rise as early as June is likely if knock-on effects materialise. Short-term interest rate expectations thus remain largely determined by the duration of the energy shock.

In the background, ongoing talks between Washington and Tehran are keeping the possibility of de-escalation open. Even a partial resolution would allow a gradual normalisation of energy flows and create the conditions for a regression of short rates, helping to reduce the current decorrelation between equity, commodity and bond markets.

Against this backdrop, the MSCI World index (in local currencies) rebounded strongly in April (up 9.6%), driven by the technology sector and the semiconductor segment in particular (SOX index up 38% over the month). All the regional indices ended in positive territory, although there was considerable variation: the Nikkei, MSCI Emerging Market and S&P 500 indices gained 16%, 15% and 10% respectively, while the EuroStoxx rebounded by just 7%. With commodities volatile, sovereign bond markets remained under pressure and the yield on US 10-year T-notes climbed 5 bps to 4.37%, while the 10-year Bund yield ended the month at 3.03% (up 3 bps). On European credit markets, investors repositioned themselves as part of a general trend towards increased risk taking. Investment Grade ended the month at 82 bps (-16 bps) and High Yield at 3% (-50 bps). Lastly, in terms of currencies, the dollar fell against both the euro (-1.5%) and yen (-1.4%) over the month.

The portfolio's equity exposure remained close to 62% despite several tactical adjustments, before some profit-taking at the very end of the month brought the equity weighting down to around 60%. As a reminder, the fund had been exposed via option positions in March, in particular through the use of risk reversals on the EuroStoxx50 at a time when the implied volatility of out-of-the-money put options seemed high. As the markets rebounded, the weighting of Euro Zone equities reached as much as 20% of the fund, taking full advantage of the convexity and activation of these option exposures. This allocation was gradually reduced to 15% over the month, in favour of US equities, which we believe are better positioned in view of US companies' results, especially in the technology sector. Bond exposure now stands at 59%, following a 24% increase in positions on Schatz futures. The portfolio's duration amounts to 2.9 years (compared with 2.5 years for the benchmark, and reflecting greater concentration on the short end of the Euro Zone yield curve). After the euro recovered, we took some profits on our EUR/USD hedges, which accounted for some 8% of the portfolio.

Asset allocation breakdown

RISKS:

The fund is exposed to the following risks :risk of capital loss, equity risk, interest rate risk, credit risk, risk associated with discretionary management, currency risk, counterparty risk, liquidity risk of underlying assets, risk associated with high yield bonds, emerging markets risk, risks associated with securities financing transactions and collateral management, risks linked to the use of overexposure, risk linked to changes in commodities prices

SFDR CLASSIFICATION²

The EU Sustainable Finance Disclosure Regulation (SFDR) is a set of EU rules which aim to make the sustainability profile of funds transparent, more comparable and better understood by end investors. Article 6: The management team does not consider sustainability risks or adverse effects of investment decisions on sustainability factors in the investment decision making process. Article 8: The management team addresses sustainability risks by integrating ESG criteria (Environment and/or Social and/or Governance) into its investment decision making process. Article 9: The management team follows a strict sustainable investment objective that significantly contributes to the challenges of the ecological transition, and addresses Sustainability Risks through ratings provided by the Management Company's external ESG data provider.

DISCLAIMER

This document has been drawn up by ODDO BHF AM SAS . Potential investors should consult an investment advisor before subscribing to the fund. The investor is informed that the fund presents a risk of capital loss, but also many risks linked to the financial instruments/strategies in the portfolio. In case of subscription, investors must read the Key Information Document (KID) and the fund's prospectus in order to acquaint themselves with the detailed nature of any risks incurred and all costs. The value of the investment may vary both upwards and downwards and may not be returned in full. The investment must be made in accordance with investors' investment objectives, their investment horizon and their capacity to deal with the risk arising from the transaction. ODDO BHF AM SAS cannot be held responsible for any direct or indirect damages resulting from the use of this document or the information contained in it.
