¹ The EU Sustainable Finance Disclosure Regulation (SFDR) is a set of EU rules which aim to make the sustainability profile of funds transparent, more comparable and better understood by end investors. Article 6: The management team does not consider sustainability risks or adverse effects of investment decisions on sustainability factors in the investment decision making process. Article 8: The management team addresses sustainability risks by integrating ESG criteria (Environment and/or Social and/or Governance) into its investment decision making process. Article 9: The management team follows a strict sustainable investment objective that significantly contributes to the challenges of the ecological transition, and addresses Sustainability Risks through ratings provided by the Management Company's external ESG data provider. | ² The summary risk indicator (SRI) is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. It scales in a range from 1 (lowest risk) to 7 (highest risk). The lowest category does not mean a risk-free investment. This indicator is not constant and is updated if the risk profile of the fund changes over time. Historical data, such as is used to calculate the risk indicator, may not be a reliable indication of the future risk profile of the Fund. There is no guarantee that the management objectives in terms of risk will actually be met. The risk indicator assumes you keep the product until the end of the recommended holding period. The actual risk can vary ! significantly if you cash in at an early stage and you may get back less.

The case for momentum investments

STOCK MARKETS MOVE IN TRENDS!

THE MOMENTUM EFFECT & THE INVESTMENT PHILOSOPHY BEHIND

CONTINUATION OF RETURNS

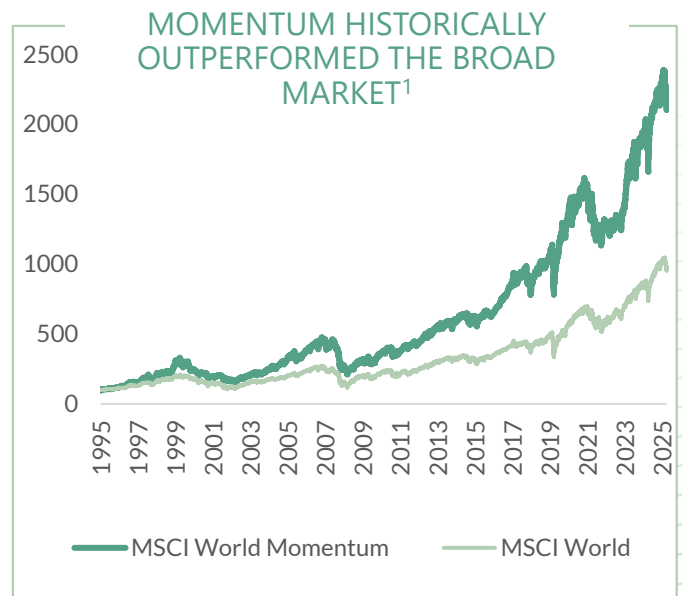

Stocks that outperformed in the past tend to continue to perform well in the future, creating trends in the market.

A STOCK MARKET “ANOMALY”

This so-called momentum effect is academically well researched and persists in various markets and for different time periods.

THESE MARKET TRENDS CAN BE EXPLOITED

By systematically capturing these trends a momentum strategy seeks to generate excess returns relative to the broad market.

BEHAVIORAL FINANCE PROVIDES THEORIES TO EXPLAIN IRRATIONAL INVESTOR BEHAVIOR CAUSING “TRENDS” IN THE MARKET

Behavioral Biases of investors lead to overreaction/underreaction to news

Why invest IN ODDO BHF GLOBAL EQUITY TREND ACCORDING TO US?

Exploitation of the momentum effect, a market anomaly based on a profound economical basis

Studies have proved for various time periods that markets move in trends. This market anomaly is called momentum effect and is caused by behavioral biases of market participants. Our proprietary trend-following investment strategy is a diversified approach to invest in different market trends with the objective to capture these trends and generate a long-term outperformance.

Rules-based investment process

Fully quantitative investment approach removing emotion from portfolio decisions. A systematic approach ensures that investments are made consistently and objectively, while also making the strategy transparent and repeatable.

Active Risk Management at the core of the strategy

The quantitative model rates equities based on a smart momentum strategy which involves a strong focus on diversification and risk management by applying various constraints in the portfolio optimization in order to avoid classic pitfalls of momentum investing like trend reversal and concentration risks.

Stable management team including the founders of the quantitative model

Stefan Braun and Karsten Seier, the developers of the strategy more than 20 years ago, successfully managed the fund and through the various market cycles and are still managing the portfolio today.
