Risk and reward profile

The Fund is classified into its risk class on the basis of historical data of the Fund or a comparable investment in the last 5 years; the classification therefore does not represent any forecast for the future. The classification is not a guarantee; it can change over time. A classification into category 1 does not mean that the Fund is not subject to any risk of fluctuation in its value.

The Fund is classified into risk class 5 because the historical data show value fluctuations of between 10 % and 15 % on an annual average.

Generally, higher value fluctuations will entail greater risks of loss, but also greater opportunities for value increases.

The following risks do not have any direct influence on the classification but may nevertheless be of significance for the Fund:

- **Operational risks including custody risks:** Errors and misunderstandings in management and custody may adversely affect the performance of the Fund.
- **Model risks:** The Fund selects its investments based on a quantitative model. The forecasting accuracy of this model may decrease.
- **Currency risks:** The Fund also invests its monies outside the Euro area. The value of the currencies of these investments may fall against the Euro.

For a detailed description of all risks, please refer to the Sales Prospectus of the Fund under “Risk information”.
