(1) The summary risk indicator (SRI) is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the market or because we are not able to pay you. It ranges from 1 (low risk) to 7 (high risk). This indicator is not constant and will change according to the fund's risk profile. The lowest category does not mean risk-free. Historical data, such as that used to calculate the SRI, may not be a reliable indication of the fund's future risk profile. There is no guarantee that the investment objectives in terms of risk will be achieved.

(2) Information on the EU Sustainable Finance Disclosure Regulation (SFDR) can be found in the SFDR classification(2) section of the document.

SUSTAINABLE REPORT – METHODOLOGY

ODDO BHF AM considers that measuring the environmental, social and governance impact of an investment is an essential step in disseminating good practices in ESG integration. To do this, it is imperative to have reliable, simple quantitative criteria (no reprocessing) and to allow comparison between portfolios regardless of their composition (large vs midcaps, geographical and sectoral diversity).

The choice of indicators is therefore crucial for the relevance of impact measurement. The data for the environmental indicators come from our external non-financial analysis provider, MSCI. We systematically indicate the availability of the data at the level of the portfolio and its benchmark.

ESG integration at ODDO BHF Asset Management | 3 systematic steps

Exclusions

- Norm-based:** exclusion of companies that do not comply with certain international standards.(chemical weapons , anti-personnel mines, violation of the principles of the Global Compact, etc.)
- Sector-based:** total or partial exclusion of sectors or activities based on ethical considerations (tobacco, gambling, weapon, adult entertainment / pornographie and Coal...)

ESG ratings

- Usage of MSCI data based on a “Best-in-Class” approach
- All titles considered for investments have at least a BB rating

Dialogue and engagement

- Regular dialogue with companies on ESG issues
- Individual and joint engagement
- Inclusion of ESG research within ODDO BHF Asset Management’s voting policy
- Escalation procedure if engagement is not conclusive

Carbon metrics methodology: We updated our methodology of carbon intensity calculation. Starting January 31st, 2023, when reported carbon values are unavailable or inconsistent, estimated carbon values are used. The estimations are based on average carbon value (scope 1+2 emissions) of sectoral peers as a function of revenues

MONTHLY MANAGEMENT COMMENT

The start of the war in Iran led to a broad selloff across equities and bonds and a rally in energy related commodities. Yield curves saw heavy bear flattening as markets repriced policy rate expectations going from expecting cuts to pricing hikes in the near term. Countries that have higher energy dependence such as Europe and UK underperformed while the US outperformed. The ECB and BoE struck a more hawkish tone during the press conferences reaffirming their readiness to react to higher prices and contain inflation expectations, if necessary. The Fed is seen as less likely to react to the supply shock given their dual mandate and lower exposure to energy prices. While macro data were less important to market action this month, notably some releases were on the weaker side such as the US labor market which saw non-farm payrolls decline by 92k (partly due to special effects such as strikes and bad weather) and the unemployment rate increase to 4.4%. In the Eurozone, February consumer and industrial data was on the weaker side as well, even before the start of the conflict, showing no signs of imminent rebound. And PMIs for March reflected the first round effects of the conflict with higher prices paid and lead time component readings. In credit we saw a modest widening and decompression, as expected. Corporate Investment Grade Bond spreads widened by 13bps and High Yield spreads underperformed widening by around 66bps. German 10Yr Bund yields increased to 3.00% while US 10Yr treasury yields increased to 4.32%.

The fund management team has decreased risk during the month. Security selection effects were negative on the back of negative selection effects in Banks and Real Estate. The fund management team participated in several new issues including those of issuers such as Deutsche Post, Amazon and BNP.

RISKS:

The fund is exposed to the following risks :risk of capital loss, interest rate risk, credit risk, risk associated with discretionary management, risk associated with commitments on forward financial instruments, counterparty risk, liquidity risk of underlying assets, risk associated with high yield bonds, emerging markets risk, Sustainability risk and on an ancillary basis currency risk, risk associated with convertible bonds, risk associated with currency conversion

SFDR CLASSIFICATION²

The EU Sustainable Finance Disclosure Regulation (SFDR) is a set of EU rules which aim to make the sustainability profile of funds transparent, more comparable and better understood by end investors. Article 6: The management team does not consider sustainability risks or adverse effects of investment decisions on sustainability factors in the investment decision making process. Article 8: The management team addresses sustainability risks by integrating ESG criteria (Environment and/or Social and/or Governance) into its investment decision making process. Article 9: The management team follows a strict sustainable investment objective that significantly contributes to the challenges of the ecological transition, and addresses Sustainability Risks through ratings provided by the Management Company's external ESG data provider.
