Macaulay duration	1.73
Average maturity (year)	2.49

Technical and risk indicators are shown in portfolio currency (in Euro)

Futures and options are not included in the calculation of the yield. The Yield to Maturity is calculated before currency hedging. The Yield to Worst is calculated after currency hedging.

The Yield to Maturity (YTM) is the estimation at a certain date of the expected rate of return of a bond portfolio if the securities are held to maturity. It does by no means constitute a promised return. It can, therefore, be affected by interest rate risks, default risks, reinvestment risks and the fact that bonds may not be held until maturity.

The Yield to worst (YTW) is the estimation at a certain date of the worst expected rate of return of a bond portfolio of which some of the securities would not be held until maturity but redeemed at the discretion of the issuer (call). It does by no means constitute a promised return. It can, therefore, be affected by interest rate risks, default risks, reinvestment risks and the fact that bonds may not be held until maturity.

Investment strategy

The Sub-Fund seeks to provide a high level of income and capital growth by investing primarily in corporate bonds denominated in Euro with a rating of at least B3 or B- and a mainly maximum residual maturity of 4 years. A minimum of 20% of the assets will be invested in sub-investment grade bonds (High Yield). Issuers are principally from countries with investment grade rating. The fundamentally driven investment process is complemented by ESG integration.

Annual performance (rolling 12 months)

(1) Risk/return scale in a range from 1 (lowest risk) to 7 (highest risk). This indicator is not constant and is updated if the risk/reward profile of the fund changes over time. The lowest category does not mean a risk-free investment. Historical data, such as is used to calculate the risk/return ratio, may not be a reliable indication of the future risk profile of the Fund. There is no guarantee that the management objectives in terms of risk and return will actually be met.

Israel	-	3.7%	-	-	-
Greece	1%	0.6%	1.8%	-	-
Others	2%	5.3%	5.9%	-	-

The breakdown takes into consideration the rating of the issuer in the case of unrated issues.

Portfolio manager comment

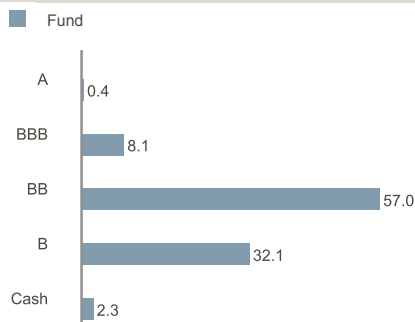

In March 2021, the European High Yield market (HEAG) showed a positive performance of 0.53% with spreads 4 bps tighter ending at 292 bps.

The month was characterized by slightly lower volatility than in the previous months and a risk-on mood based on expectations of a strong economic recovery supported by the vaccination campaign and the fiscal stimulus program. Q4 results were broadly in line with expectations reflecting a strong industrial recovery on the one hand and still adversely impacted businesses that are exposed to Covid-19 restrictions on the other hand. Interest rates in Europe were rather range-bound in March, with ECB accelerating purchases under the PEPP program. 10y US treasury yields continued to rise significantly, putting pressure on long-dated BBs and hybrids in Europe. Primary market was very active in March.

The ODDO BHF Euro Credit Short Duration Fund cautiously invested cash proceeds from called / matured / tendered bonds. At the end of March, the fund had an allocation of approximately 89% High Yield and 11% Investment Grade bonds (including cash). The fund maintains a low duration to maturity with at least 22% of the portfolio maturing by the end of 2022.

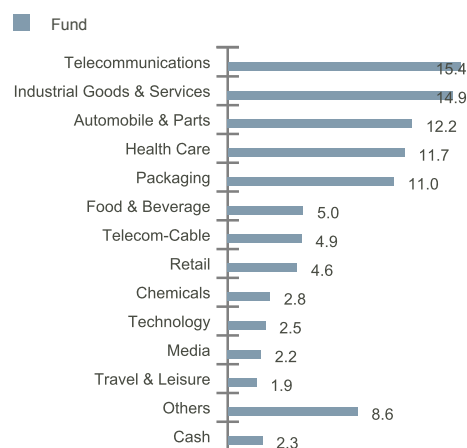

Going forward, the European High Yield market faces several uncertainties related to the vaccine dissemination, the reopening of the economy, inflation expectations and interest rate movements. In this market environment short-dated bonds offer an attractive risk-adjusted return profile.
