(1) The summary risk indicator (SRI) is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the market or because we are not able to pay you. It ranges from 1 (low risk) to 7 (high risk). This indicator is not constant and will change according to the fund's risk profile. The lowest category does not mean risk-free. Historical data, such as that used to calculate the SRI, may not be a reliable indication of the fund's future risk profile. There is no guarantee that the investment objectives in terms of risk will be achieved.

MONTHLY MANAGEMENT COMMENT

European equity markets delivered strong gains in April 2026, with the Stoxx Europe 600 rising 4.8%, marking its best monthly performance since January 2025. The EURO STOXX 50 Index climbed 5.60% to 5,881.51, also its largest one-month gain since January 2025. Major national indices participated in the rally, with France's CAC 40 advancing 3.81% and Germany's DAX gaining ground as well. The rally was initially driven by hopes of a US-Iran peace deal earlier in the month. Markets navigated a complex backdrop that included central bank policy decisions from both the European Central Bank and Bank of England, which held rates unchanged, as well as rising euro area inflation that reached 3.0% in April, up from 2.6% in March. The Energy sector was by far the best performer in March 2026, surging dramatically as oil prices spiked due to the Strait of Hormuz closure. The worst-performing sectors included: Communications – down 5.7%, Technology – down 4.7%, Industrials – down 3.4%, Materials – down 2.8%.

Best Performing Sectors: Consumer Discretionary led the market with a robust 15.0% return, significantly outpacing other sectors. Technology followed with a 7.9% gain, while Energy and Real Estate posted solid returns of 7.4% and 7.1% respectively.

Worst Performing Sectors: Utilities lagged with only a 1.6% gain, while Health Care advanced just 1.9%. Materials and Financials also underperformed, each rising approximately 2.7-3.0%.

From a factor perspective, High Risk showed the strongest performance, while Value and Dividend factors underperformed.

The ODDO BHF Europe Equity Trend fund underperformed its benchmark in April. The portfolio's underperformance was primarily driven by negative security selection effects, particularly in the Health Care sector and individual holdings like SAP, Deutsche Telekom, and UCB. While asset allocation decisions proved beneficial, especially the overweight in Banks and underweight in Health Care, these gains were insufficient to offset the security selection headwinds. The strong performance of industrial holdings like Siemens Energy and ABB, driven by robust earnings and positive guidance revisions, provided some offset but could not fully compensate for the broader selection challenges across the portfolio.

RISKS:

The fund is exposed to the following risks: market risk, risks associated with the use of derivative instruments, custody risk, Sustainability risk

SFDR CLASSIFICATION²

The EU Sustainable Finance Disclosure Regulation (SFDR) is a set of EU rules which aim to make the sustainability profile of funds transparent, more comparable and better understood by end investors. Article 6: The management team does not consider sustainability risks or adverse effects of investment decisions on sustainability factors in the investment decision making process. Article 8: The management team addresses sustainability risks by integrating ESG criteria (Environment and/or Social and/or Governance) into its investment decision making process. Article 9: The management team follows a strict sustainable investment objective that significantly contributes to the challenges of the ecological transition, and addresses Sustainability Risks through ratings provided by the Management Company's external ESG data provider.
