Modified duration to worst	2.49
Spread (bp)	325
Macaulay duration	2.55
Average maturity (year)	2.40

Technical and risk indicators are shown in portfolio currency (in Euro)

Futures and options are not included in the calculation of the yield. The YTM is calculated before currency hedging. The YTW is calculated after currency hedging.

The Yield to Maturity (YTM) is the estimation at a certain date of the expected rate of return of a bond portfolio if the securities are held to maturity. It does by no means constitute a promised return. It can, therefore, be affected by interest rate risks, default risks, reinvestment risks and the fact that bonds may not be held until maturity.

The Yield to worst (YTW) is the estimation at a certain date of the worst expected rate of return of a bond portfolio of which some of the securities would not be held until maturity but redeemed at the discretion of the issuer (call). It does by no means constitute a promised return. It can, therefore, be affected by interest rate risks, reinvestment risks and the fact that bonds may not be held until maturity.

*Definitions of the financial indicators used are available for download on the website www.am.oddo-bhf.com under the heading "Regulatory information".

Investment strategy

The Sub-fund seeks high returns and capital growth. The Sub-fund invests in a portfolio, of which at least two-thirds are euro-denominated listed bonds issued by public or private companies, with no regional restriction, concentrating on lower quality issues (rated lower than investment grade).

Annual performance (rolling 12 months)

(1) Risk/return scale in a range from 1 (lowest risk) to 7 (highest risk). This indicator is not constant and is updated if the risk/reward profile of the fund changes over time. The lowest category does not mean a risk-free investment. Historical data, such as is used to calculate the risk/return ratio, may not be a reliable indication of the future risk profile of the Fund. There is no guarantee that the management objectives in terms of risk and return will actually be met.

Other	0.3%	10%	8.6%	0.9%	-

The breakdown takes into consideration the rating of the issuer or the guarantor in the case of unrated issues.

Portfolio manager comment

In October 2019, the European High Yield market (HEAE) weakened and showed a negative performance of 0.22% with spreads 19bps wider ending at 392. During the month, investors continued to take profit and de-risked their portfolios mainly due to concerns about future economic growth, witnessed by weakening European macroeconomic indicators and profit warnings by companies. In this context, cyclical sectors performed poorly during the month. The technical market support turned out to be ok: inflow in the asset class persisted and numerous new issues were priced. The ODDO BHF Euro High Yield Bond Fund remains defensively positioned via its duration underweight and lower OAS versus the benchmark. The fund holds risk-adjusted underweight positions in cyclical sectors such as Auto, Chemicals, and Travel&Leisure (mostly transportation names). The fund remains underweight in BB and CCC rated bonds and overweight in single-B rated bonds. Looking ahead, the European High Yield market is expected to show higher volatility on the back of weakening economic data, softer company results, political events like Italy, and trade negotiations. Credit selection remains essential and is becoming more important in the current environment of higher idiosyncratic risk to achieve an outperformance.
